SECTION 6 - MISCELLANEOUS SERVICES

N. CONNECTION OF COMMERCIAL MOBILE RADIO SERVICE PROVIDERS TO E911 SERVICES (Continued)

1. SERVICE DESCRIPTION (Continued)

- C. The E911 data base consist of data records provided by various service providers located within the ALLTEL E911 service area. Each service provider, including the CMRS, are responsible for providing their data records for the ALLTEL E911 database. These records must be present in the ALLTEL E911 database for the Real-Time Data Interface to function properly. CMRS records in the E911 database contain static cell site sector location information that will assist the PSAP in determining the general location of the 911 caller. These static records do not contain the Mobile Directory Number (MDN) of the caller when initially inserted into the database. The MDN information is populated dynamically in the ALLTEL E911 database when initially inserted into the database. The MDN information is populated dynamically in the ALLTEL E911 database during the call processing.
- D. The ALLTEL E911 System and ALI computers support different application level protocols for accepting Phase 1 CMRS E911 real-time updates. CMRSs wishing to use one of the supported interfaces must ensure compatibility with the solution provider as well as ALLTEL's contracted vendor managing the ALI database. Detailed application level specifications for these solutions are available directly from each of the respective manufacturers.
